

aerower[®]

a powerful evolution jump

JUMPER1

We have created something new! Steady and reliable jumper boots that can be used by anyone, anywhere. Is so easy to use, you'll not need more than a few seconds to start jumping with them, it's like if you walk with normal footwear. Feel free to do indoor or outdoor training, because we design them with the best materials to stand any surface.

Our Aerower Quality™ System, is unique in the world and tests the reliability and elasticity of each Rebound System (RS), one by one, according to the highest European Quality Standards.

You just have to worry about enjoying jumping, dancing, walking, running and having a great time!

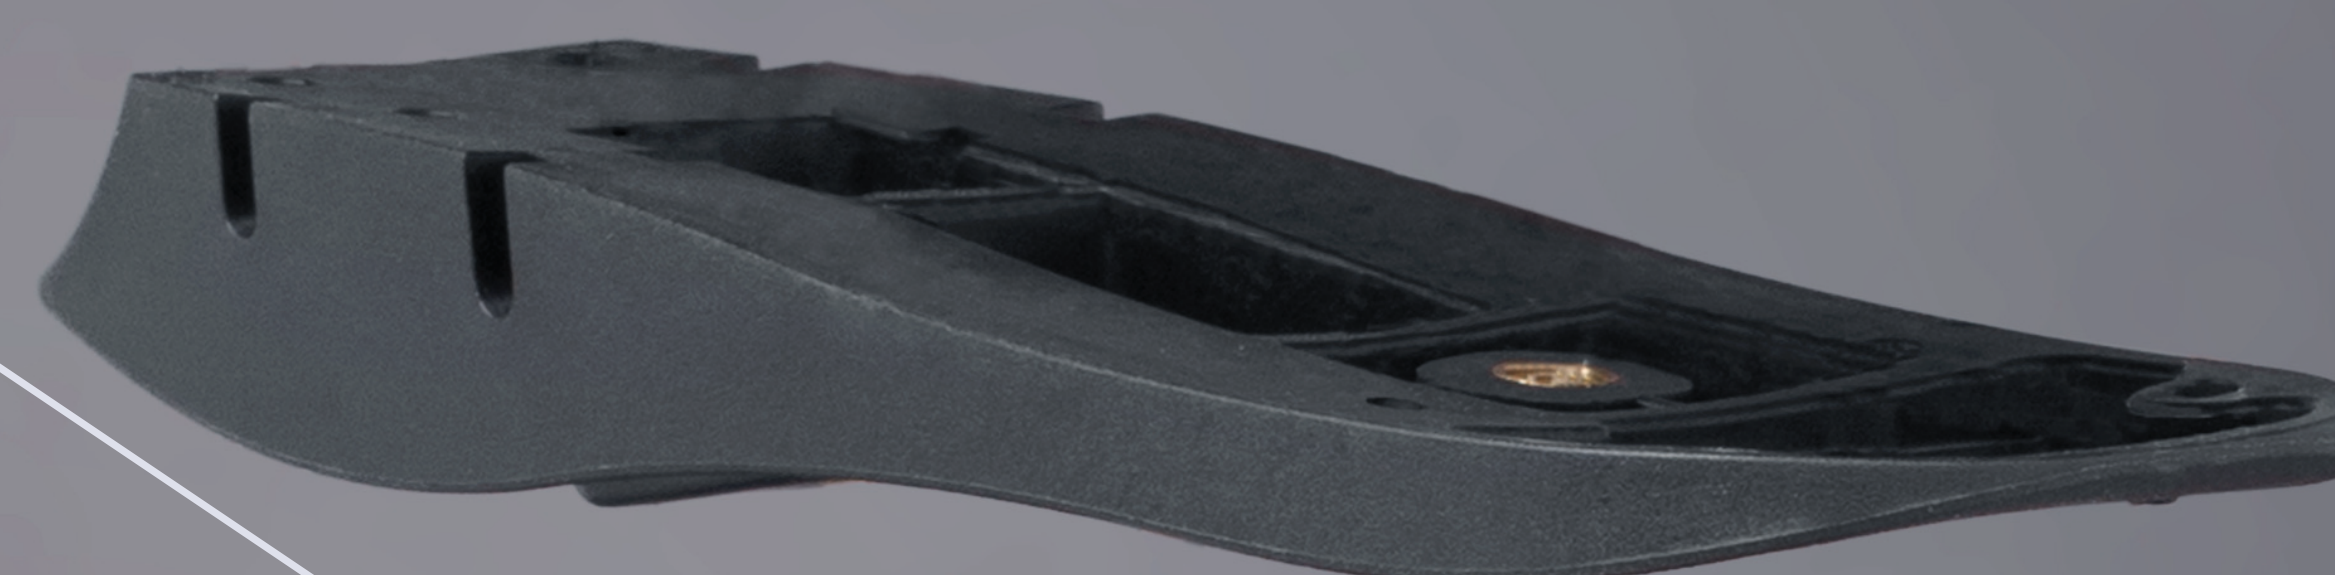

We check each arc separately. When one of them doesn't meet our quality standards, it is discarded. In this way, we minimize the most of any manufacturing defects.

We have four different models with varied resistances for you to fully enjoy the feeling of bounce, adjusted to your weight and physical condition.

We have designed a security component with which you will have no problem in case you get carried away by the excitement and extreme jumps.

The multi-band have nine circular section elastic bands that you can cut to adapt them with the maximum precision, to your weight or to customize them depending on how you like to jump, to run, to dance, etc.

One of our biggest challenges was to design a reliable, functional and easily mounted and dismantled sole without any tools. Soon you will have different models for specialized uses.

TECHNOLOGIES DEVELOPED FOR THE JUMPER1 MODEL

Our R&D department is led by professionals with more than 20 years of experience in sports products and latest generation industrial materials. This has allowed us to develop innovative technologies and industrial processes unique in the world. Designed and produced in Europe to offer to the fitness market a product with the highest quality standards that can be accessible to everybody, the most complete exercise known: "Rebound exercise is the most efficient, effective form of exercise yet devised by man." (Division of Biomechanical Research, NASA-Ames Research Center, 1980)

**emRS**

easy mounting rebound system

We have created and patented a Suspension & Rebound System that allows you a simple boot assembly and personalization. You will only, occasionally, need an allen wrench that is included.

**acs**

anti-collapse safeguard

Due to the dynamics of the system's geometry, some elements have been developed to avoid the collapse of the final phase of the compression in the multiband and thus, obtain the adequate progression in the jumps' rebound effect.

**BPS**

buffer protection system

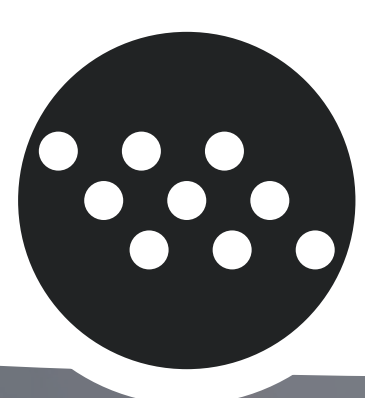

If at any point you make an extreme jump that compresses the RS System in its totality, the bumper will protect the system, avoiding the collision between the arcs and the multiband, avoiding the detrimental impact to your joints.

**saF**

secure arc-fastening

To avoid accidental disassembly and to allow a manual installation and disassembly, the system has an innovative cross-hitch technology. See the User Guide for a correct mounting.

**cms**

customizable multiband system

With 9 bands that can be adjusted into different calibrations, this registered design provides great precision and individual adaptability.

**msB**

multi-size boot

To facilitate the adaptation to different foot sizes, our boots are available in five sizes (XS, S, M, L, XL) and each one covers the different sizes from US men 1 / EU 32 to US men 11 / EU 46.

**CWR**

customized weight resistance

4 different hardness arcs multiplied by all the different multiband configurations makes the Jumper1 perfectly adjustable to your weight and athletic condition.

**mw**

machine washable

The liner (internal boot) is removable and can be washed by hand or by washing machine for perfect cleaning.
